## Problem

Let  $F$  be a field.

Prove part:

If a real number  $c$  is a root of an irreducible polynomial of degree  $> 1$  in  $\mathbb{Q}[x]$ , then  $c$  is irrational.

## Step-by-step solution

### Step 1 of 2

Let  $F$  be a field. Objective is to prove that if a real number  $c$  is a root of an irreducible polynomial of degree  $> 1$  in  $\mathbb{Q}[x]$ , then  $c$  is irrational.

Consider that real number  $c$  is a root of an irreducible polynomial  $p(x)$  of degree  $> 1$  in  $\mathbb{Q}[x]$ . Assume, if possible, that  $c$  is rational number (not irrational).

Note that,  $\mathbb{Q}[x]$  contains all the polynomial with rational coefficients. Also by the assumed condition,  $p(c) = 0$  where  $c \in \mathbb{Q}$ . That is, the polynomial  $p(x)$  has a rational root in  $\mathbb{Q}[x]$ . But it cannot be possible because polynomial  $p(x)$  is irreducible in  $\mathbb{Q}[x]$ . Thus, assume assumption was wrong, and  $c$  must be irrational.

---

**Step 2 of 2**

Hence, if a real number  $c$  is a root of an irreducible polynomial of degree  $> 1$  in  $\mathbb{Q}[x]$ , then  $c$  is irrational.
