Definitions

$$\phi : C_1 \rightarrow C_2$$

$$\psi : C_2 \rightarrow C_3$$

$$f : C_2 \rightarrow K$$

$$f\phi : C_1 \rightarrow K$$

$$\text{ord}_{\phi P}(t_{\phi P}) = 1$$

$$\text{ord}_{\phi P} \left(t_{\phi P}^{e_{\psi}(\phi P)} \right) = e_{\psi}(\phi P) = \text{ord}_{\phi P}(t_{\psi\phi P} \circ \psi)$$

Applying the pullback to $t_{\phi P}^{e_{\psi}(\phi P)}$ we get

$$\text{ord}_P(t_{\phi P}^{e_{\psi}(\phi P)} \phi) = e_{\psi}(\phi P) \text{ord}_P(t_{\phi P} \phi) = e_{\psi}(\phi P) e_{\phi}(P)$$

But we also apply it to $t_{\psi\phi P} \psi$ to get $t_{\psi\phi P} \psi \phi$ which has the same order. And note that $e_{\psi\phi}(P) = \text{ord}_P(t_{\psi\phi P} \psi \phi)$.
